

Create a culture of safety

While crucial and legally mandated, traditional safety training can often be a challenge due to stale, outdated, and un-engaging content. Not only are organizations spending valuable training budget on unappealing content, but employees can put themselves and the company at risk if safety courses only “check the box” and don’t test for comprehension.

On average, the cost of a work-related injury is over \$39,000. The [National Safety Council](#) further states that, depending on the type of injury, that cost can reach upwards of \$80,000. Additionally, each [OSHA penalty](#) for non-compliance costs \$13,260 with willful or repeated offenses clocking in at \$132,398 per violation.

While, alone, these numbers are staggering, combined with days and productivity lost, decreased employee morale, increases in workers’ compensation insurance rates—an on-the-job injury is a risk organizations want to avoid at all costs.

How OpenSesame can help

Single source for all safety needs

Easy course updates

OSHA-compliant content

Industry-specific training content

Curation services to help you select the right courses for your organizational needs

Seamless LMS integration for tracking and assigning

Hundreds of courses in multiple languages to accommodate your global, diverse workforce

Top safety compliance training topics:

- OSHA
- First Aid
- Emergency Preparedness
- Lockout/Tagout
- Fall Protection
- Personal Protective Equipment (PPE) Training
- Slips, Trips, and Falls Prevention
- Hazard Communication
- Bloodborne Pathogens (BBP)
- Active Shooter/Threat Response
- Driver Safety
